DETAILED ACTION

Allowable Subject Matter

Claims 1-45 are allowed.

The following is an examiner's statement of reasons for allowance: As the claimed invention was read in light of the specification, the prior art of record fails to disclose or render obvious a stage assembly that moves a device an X stroke along an X axis and along a Y axis, the stage assembly comprising a guide base, a stage that retains the device, and a Y mover that moves the stage only along the Y axis relative to the guide base, the Y mover including a reaction component and a moving component that is secured to the stage, wherein one of the components includes a magnet having a magnet length that extends along the X axis and the other component includes a conductor having a conductor length along the X axis, and wherein the magnet length is sufficiently long so that the magnet interacts with the conductor over the range of the X stroke and there is relative movement between the conductor and the magnet along the X axis over the range of the X stroke.

The closest prior art, Itoh et al., teach a stage assembly that moves a device an X stroke along an X axis and along a Y axis, the stage assembly comprising a guide base, a stage that retains the device, and a Y mover that moves the stage only along the Y axis relative to the guide base, the Y mover including a reaction component and a moving component that is secured to the stage, wherein one of the components includes a magnet having a magnet length that extends along the X axis and the other component includes a conductor having a conductor length along the X axis. However, they teach that the conductor and magnet move together, and there is not relative motion between the two.
